

AERGO → HPP

Token Swap & Migration Guide

AERGO ⇔ HPP Token Swap & Migration Guide

With the official launch of House Party Protocol(HPP), all AERGO tokens will be fully migrated to the new HPP token. This guide outlines the migration process for all AERGO token holders.

- Migrating from AERGO to HPP is mandatory.
- If your AERGO tokens are stored on a centralized exchange(CEX) that supports HPP, the swap will be processed automatically.
- If you hold tokens in a personal wallet such as MetaMask or Aergo Connect, you must follow the manual migration steps below.

HPP tokens will exist in three multi-chain formats, each with its own network and specific purpose:

Layer	Network	Token Name	Role & Functionality
Execution Layer	HPP Mainnet(Arbitrum Orbit-based L2)	HPP(Mainnet ERC-20)	Main execution environment for AI comutation, smart contract execution, and governance. All CEX/DEX listings occur here.
Settlement Layer	Ethereum(L1)	HPP(Ethereum ERC-20)	Backup asset for enhanced security and settlement.
Legacy Layer	HPP(AERGO Mainnet)	HPP(AERGO Mainnet)	Maintains existing Aergo-based integrations with enterprises and government agencies.

How to Migrate Based on Where Your Store Tokens:

Where Your AERGO Is Stored	Do You Need to Migrate?	What to Do
On a supported centralized exchange(CEX)	 No	No action needed. The exchange will handle the swap automatically. Check the official announcements for details.
In MetaMask as AERGO(ERC-20)	 Yes	Follow the self-migration steps outlined below.
In Aergo Connect as AERGO(Native)	 Yes	Follow the self-migration steps outlined below.

1. If held in a supported CEX:

If your AERGO tokens are stored in an exchange that officially supports HPP migration, they will be automatically swapped to HPP tokens without any action on your part.

- All swaps are conducted at a 1:1 ratio.
- No additional steps are required from the user.
- Exchange-specific timelines will be announced individually by each exchange.

2. If held in a wallet(Metamask, Aergo Connect, etc.)

Step 1:

- Go to the AERGO Bridge & HPP Migration Portal. (The site will be updated in time for the official migration launch. Currently, only the AERGO Bridge is available.)
- Follow the on-screen instructions to connect your wallet and start the migration.
 - AERGO(ERC-20): Converted immediately.
 - AERGO(Native): Converted within 24 hours.

Step 2:

- Access the official HPP Bridge link(to be provided later.)
- Bridge HPP(Ethereum ERC-20) to HPP(Mainnet ERC-20)
- Funds will be deposited within approximately 5 minutes after bridging.

⚠ HPP(Mainnet ERC-20) uses ETH for gas fees. Make sure you have some ETH in your wallet before sending HPP.

Token Swap Portal Opening & Related Notice

The Token Swap Portal will open on August 18, 2025. However, the migration and bridge functions will be provided in line with the official support schedule. After the official support date, users will be able to access the portal and swap their tokens at any time.

In the initial phase, we will focus on stabilizing the token swap process and exchange listings, making every effort ensure HPP is listed on all exchanges where AERGO was previously traded. Liquidity on DEXs will be introduced gradually, with availability expanding step-by-step.

Important Links

- HPP Token Swap Portal: <https://portal.hpp.io/> (Will be activated on August 18, 2025, alongside the website update. Migration functionality will go live with official support.)
- AQT Holder Migration Guide: Check AQT Migration Guide
- Exchange-specific announcements: TBD

? Questions or Support

If you have any questions about the token swap, rebranding, or HPP in general, feel free to reach out via email or our official Telegram channel:
